AFTER MARKET 2018

Special parts for installation of ambulance

JOIN INTEGRA NETWORK

INTEGRA is an Italian company, leader in the design and production of components in composite material for the panelling and internal/external furniture of ambulances and special vehicles, that supplies ambulance and special vehicle manufacturers in more than 25 countries worldwide.

Today INTEGRA proposes itself as global partner also to whom is interested in becoming a vehicle converter and wishes to start a new activity or to enrich its own with a new professional skill.

Our experience, gained over thirty years, allows us to offer to our partners complete solutions for the fitting-out, including the supply of electric and electronic components, and the transfer of the "know-how" through the assistance with the assembly process as well as the professional training of the workforce.

A sharing of added values that INTEGRA can grant, also to the ones less experienced in the field of the vehicles fitting-out, by releasing all the skills in order to obtain a mutual success.

The products supplied individually or in assembly kit, are realised, with the highest innovation level with the Italian Design, in a modern plant where the process are organised and certified ISO 9001:2010. The products made for the ambulance fitting-outs are in conformity with the European norm EN1789:2014 and can be used for a wide range of vehicle brands.

RTM Technology

INTEGRA specializes in the design and manufacturing of models, molds, counter-molds and in the molding of artifacts and components of any shape and size, using RTM Technology (Resin Transfer Molding).

Resin Transfer Molding (RTM) is a low-pressure injection process for production of composite materials, with the greatest potential in terms of cost and performance to overcome the difficulties linked to medium and high volume productions. All products are manufactured with controlled processes, according to ISO9001 Quality Management System.

KNOW HOW transfer solutions – Assembly technical support

INTEGRA transfers its KNOW HOW, providing education and training programs to the workers engaged in the assembly of components and systems, up to the complete preparation of the vehicle.
